**GLY-PRO™ FG HTF
Food and Drug Administration (FDA) Compliance**

GLY-PRO™ FG Heat Transfer Fluid is composed of pharmaceutical-grade propylene glycol and food-grade inhibitors. All ingredients are recognized as safe by the FDA under its food additive regulations (21 CFR 184.1666 and 21 CFR 182.6285). Similarly, FSANZ permits the use of propylene glycol (with the additive code 1520) in a range of food products, subject to good manufacturing practices.

Propylene glycol, a substance recognized for its use in a wide array of applications, is generally regarded as safe (GRAS) by major food safety authorities, including the U.S. Food and Drug Administration (FDA) and Food Standards Australia New Zealand (FSANZ).

Given this regulatory approval and extensive history of safe use, we certify that GLY-PRO™ FG is suitable for use as a heat transfer fluid in food processing equipment where incidental food contact may occur.

Please reach out for any additional information or clarification.

Regards
